

Eco-Friendly Pools & Spas

Due to the non-porous finish of our pools, fewer chemicals are needed because algae is less prone to attach to smoother surfaces. Additionally, less cleaning will have to be performed using automatic pool cleaners saving electricity. When automatic pool cleaners are used, the time it takes to clean the pool will be reduced saving additional energy.

As fiberglass pools do not rely on steel panels or steel mesh/rebar for structure, they do not have the potential to leech chemicals and rust back into the groundwater as a more conventional constructed pool would.

Fiberglass pools in general act as a natural insulator. Your filter and heater will potentially run dramatically less than equipment on vinyl/gunite pools. Depending on the climate and size of the pool, a homeowner can save up to \$225.00 per month on their pool maintenance with our pools versus other types of pools (vinyl/gunite). With more and more people concerned about our environment, our Eco-Friendly pools are already the pool of tomorrow. Not only do our pools use less chemicals and energy, our pools never need to be re-plastered, nor do they have a liner to replace – thus resulting in less waste in our landfills.

- Save up to \$225 per month
- Requires fewer chemicals
- Less waste in our landfills
- No chemicals or rust in ground water
- No re-plastering needed

Viking Pools was selected to participate in a LEED Platinum certified project called Eco-Smart of Florida. This cutting edge green project is 100% eco-friendly and will contain the 50 top green products and service companies in the industry. Read more at www.VikingPools.net and on our blog.

Escape

From the World

Without leaving the comforts of home

VIKING POOLS

With over 70 designs and countless options and features, the design possibilities are virtually limitless with a Viking pool.

ES ICC EVALUATION SERVICE
Ensuring that building products meet code requirements.

Our pools are ICC Certified.
